Atlas bodyshop platforms

The Atlas lifts have been specially designed by **Alfadis Platforms** to meet the needs of every bodyshop professional. As with our range of platforms, we aimed to achieve superior quality, durability and ease of use, while maintaining a safe working environment. Together with **Alfadis Platforms**, **Sima** is also the exclusive distributor of the complete Atlas range.

Depending on your needs, we offer three different models:

ATLAS BODY

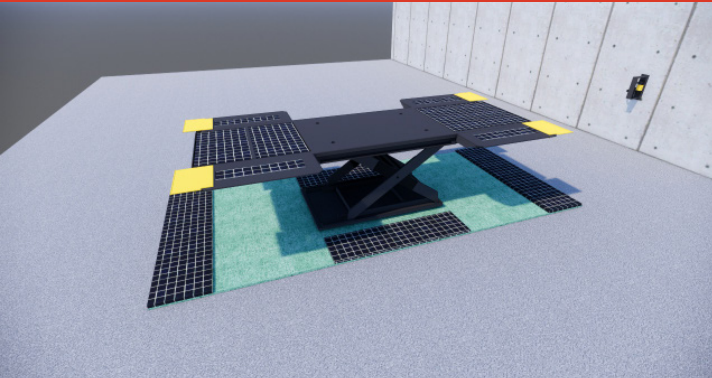

For quick work !

Atlas Body is a platform that allows the car to be lifted by lifting up the chassis with the telescopic arms.

The device is ideal for lifting cars in body shops. It can be mounted in concrete or gratings. This platform puts the car at the desired height, allowing you to work in a correct and ergonomic way.

ATLAS WHEELS

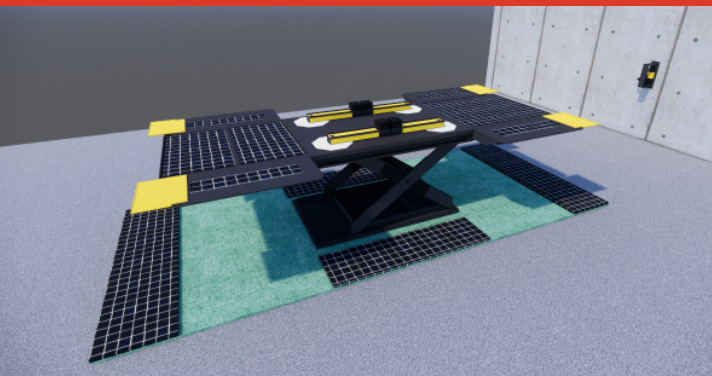

The perfect lifting platform for preparation work and finishing work!

Normally the operator must work in a curved position for most bodywork damage. This leads to long-term fatigue and health problems.

With the **Atlas Wheels**, the worker does his job by adapting a correct straight posture. In addition, it improves productivity and quality by giving you more control over the object to be sprayed. The uplifting and downlifting of the elevator is gradual.

This platform can be mounted on concrete as well as in concrete or gratings.

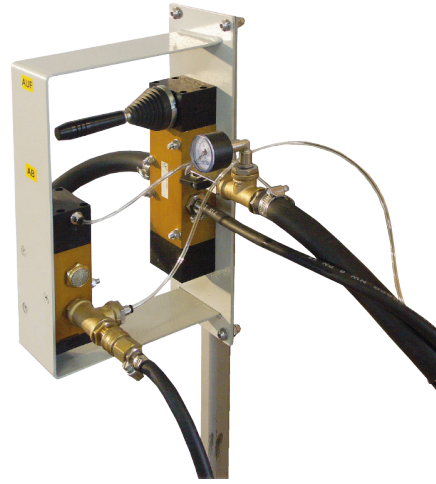

ATLAS DUO

Combined lifting platform.

With the **Atlas Duo**, you have the possibility to lift the car up through the chassis as well as to lift the car by pressing on the wheels.

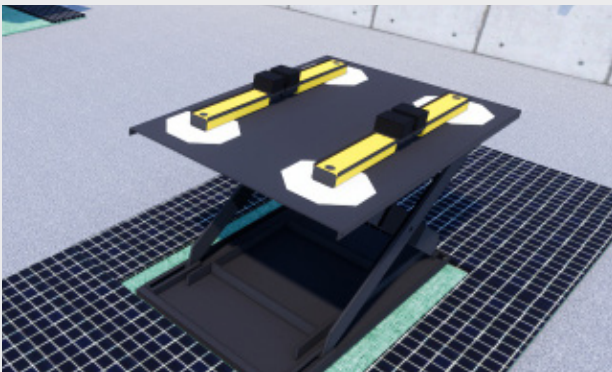

This lift allows the worker to work ergonomically. The intermediate plate of the lift can be removed to allow you to get even closer to the vehicle. Like the Atlas Wheels, the Atlas Duo can be mounted on concrete as well as in concrete or grating.

TELESCOPIC ARMS

The telescopic support arms are **360° rotatable** and make it possible to lift very long vehicles such as luxury cars and commercial vehicles as well as very short vehicles such as compact city cars.

Each arm, each support, can carry up to **750kg** and makes it easy to lift wheel-free.

ADVANTAGES

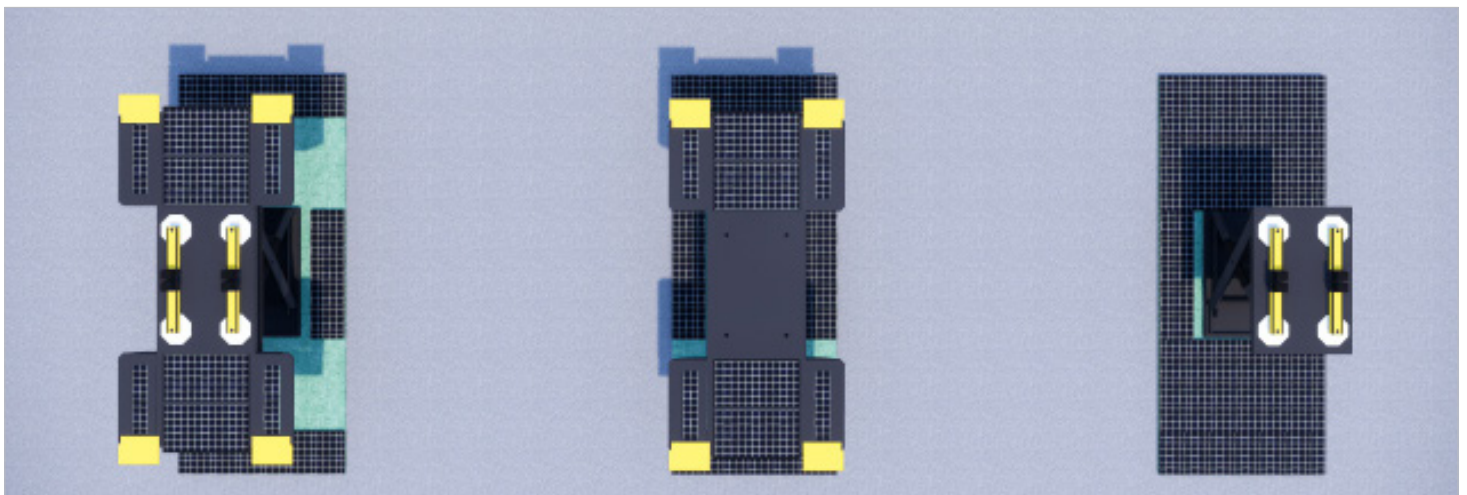

Outstanding load capacity:

With a load capacity of **3300 kg** and a lifting capacity of 0.93m, the Atlas lift platforms are versatile and can even lift heavy trucks and vans!

Work safely & ergonomic:

Because the control panel is at a safe distance of at least 1.5m from the lift, accidents in which limbs can be clamped are avoided.

By placing the lift at the desired height, each employee can work ergonomically for a long time, which can only improve the quality of the work.

Product specifications

With the Atlas range, Alfadis has the perfect lift for bodywork. The development of these systems took place in close cooperation with the users in several body repair centers.

Depending on your needs, we offer three different models.

Below you will find the specifications of our three models:
