

DRAPER DM 200

► Soybean and small grains header.

Anywhere you are,
there is an ideal Maizco
header for your field.

Maizco[®]

Maximum harvesting efficiency.

Discover the New Maizco Draper DM200, with a wide range of cutting widths (30/35/40/45 ft). Thanks to a uniform crop flow to the feeder house, Draper DM200 guarantees the highest combine throughput with a gently treatment of crops and minimal losses.

- Go wider on the field.
- Reduce fuel consumption.

High-tech for top performance.

Double epicyclic knife drive gearbox (PTO driven), which provides a highly efficient cutting system.

Hydraulic driven side belts with speed regulation. It allows operator easily fit header to all crop conditions to maximize the operational performance.

Hydraulic header tilt, to optimize the cutterbar angle for difficult harvest conditions.

DM200. Get the most of your harvest.

Adaptability. This header can be adapted to most common combine models.

100% flexible cutterbar to match field conditions, with hydraulic control from the cab.*

Exclusive Orbital reel provides continuous crop flow, less slugging and also less wrapping in green crops.

More working hours by day. The new double central belt feeding system increases the capacity of combine, allowing you to start work earlier and finish it later.

Lower combine parts wear, due to a more even feed of grain.

**Rigid frame available.*
