

In today's environment, perimeter security of your business premises has never been more important. Before designing a new installation we will discuss with you your security requirements, the operation conditions and the appearance of the fence in relation to existing premises so the external appearance of the building need not suffer as the fences and gates are tailored to complement your current surroundings.

To complement our gates we manufacture and erect all types of perimeter fencing from traditional railings with wrought iron features to palisade and chain link fencing for the industrial and commercial environment.

We manufacture a wide range of swing and sliding gates which can be automatically controlled if required.

Products include:

- **Traditional railings**
- **Wrought iron features**
- **Palisade**
- **Chain link**
- **Weld mesh**
